### **DETAILED ACTION**

1. The amendment filed 8/10/04 has been entered.

#### ***Information Disclosure Statement***

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

#### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 27, 29, and 45 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims recite "a stack of sheets". Is this the same stack of sheets referred to in the independent claims from which they depend?

#### ***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-45 are rejected under 35 U.S.C. 102(b) as being anticipated by Fogg. Fogg discloses a device for conditioning an edge of a stack of sheets to be bound that includes a stack clamping mechanism (2); a piercing member (5) with at least one ceramic cutting element (see col. 5, lines 70-75); a positioning mechanism (6); and a drive mechanism (14) with a support member (11) mounted at a first location (12) that reciprocates between a withdrawn position and a piercing position (see col. 4, lines 45-61). The piercing members (5) reciprocate at different points in time (at a first point in time, they all go up, at a second point in time they all go down, they all go up, they all go down).

### *Conclusion*

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
